I. PROJECT OVERVIEW

A. Project Background

The Nonnewaug High School Renovation project is anticipated to be a “renovate-to-new” school project in the Region 14 school district which includes the towns of Woodbury and Bethlehem, Connecticut. Nonnewaug High School complex comprises of three building units – the 3 level Academic Unit, the 2 level Student Services Unit, and the single level Agri-Science Unit. The Agri-Science Unit is immediately adjacent to the Student Services Unit but the units are not currently connected. It is noted that the Agra-Science Unit is not considered a part of this project.

This project will involve renovation of the Academic Unit and Student Services Unit, the school auditorium and cafeteria, and site work improvements to the parking lot, athletic fields, and tennis courts.

The S/L/A/M Collaborative is the architect of record for the project and Colliers International is the Owner’s Project Manager.

The Region and its Public Building Commission (PBC) requests written proposals to secure commissioning authority (CxA) services for the Nonnewaug High School. The PBC is committed to commissioning this facility to systematically optimize the building and ancillary systems so that they operate efficiently and effectively in accordance with the PBCs Project Requirements, and that the facility staff has adequate system documentation, and training. It is the intent of the PBC to provide commissioning for this facility that is consistent with the Connecticut High Performance Building Construction Standards for State Funded Buildings.

B. Project Description

The Nonnewaug High school serves grades 9-12. The three level Academic Unit, built in 1970, has a total approximate area of 111,520 SF. The two level Student Services unit was built in 1999 and has a total area of approximately 32,030 SF. The Student Services unit houses the school administrative offices, Cafeteria, Media Center and the Board of Education offices. The detached Agra-Science Unit was built in 1970 with an approximate area of 34,350 SF and is classified as a separate space for building purposes and will be addressed in a separate building project.

The CxA will plan, manage, perform and report on the commissioning activities, utilizing the reporting formats and standardized forms provided by the CxA whenever required. The CxA will submit deliverable report to the PBC according to a project schedule set by CxA and agreed upon by the PBC. It is important that all commissioning tasks be conducted in a transparent manner and involve the building engineer and operations staff to the greatest degree possible.

The management structure is traditional design, bid, build with full design documents and specifications developed by an architectural/engineering firm. The construction documents will be let out to bid and a construction manager at risk has been hired to complete the construction. The PBC's primary construction representative on-site will be provided by the separately contracted services of an Owner's Project Manager. The commissioning authority will be hired by and report directly to the PBC.

The systems to be commissioned are those required by the CT High Performance Building regulations:

1. Heating, Ventilation, air conditioning, and refrigeration systems and associated controls
2. Lighting and day-lighting controls
3. Domestic hot water system
4. Renewable energy systems
5. Water using systems
6. Fire Protection systems
7. Energy Management system
8. Emergency Power system
9. Building envelope system

II. SCOPE OF WORK

Commissioning is required as one quality measure of the construction of the School Project in order to assure that the final building meets the original intent of the Region's design. The proposer is free to suggest changes and improvements to this process. The following is a summary of the commissioning process and scope of work the Region requests for this project.

A. Commissioning Process during Design

The commissioning process activities completed by the commissioning authority during the design phase include:

1. Assist the District in development of the PBC's Project Requirements documentation for clarity and completeness.
2. Review and comment on the Basis of Design with regard to the PBC's Project Requirements.
3. Participate in one (1) Integrated Design Meeting prior to the development of contract documentation.
4. Participate in meetings, design workshops and design phase meetings during the design phase.
5. Develop full commissioning specifications for all commissioned equipment. Coordinate this with the architect and engineers and integrate the commissioning specifications into the overall project specification package. D. Additional Commissioning Authority Responsibilities

In addition to duties described above, the commissioning authority (CxA) will have the following responsibilities and authority:

The commissioning authority (CxA) is not required to:

1. Establish design concept, design criteria, compliance with codes, design or general construction scheduling, cost estimating, or construction management. The CxA may assist with problem-solving or resolving non-conformance or deficiencies, but ultimately that responsibility resides with the construction manager at risk and the design team.
